

LinearBench Dashboard (LBD) was developed in response to the growing demand for transportation-specific data visualization and BI tools. Powered by Sisense technology, LBD enables transportation professionals to gain deep insight into vast and diverse data quickly, without coding.

## Advantages

- Built on the robust Single-Stack™ BI platform from Sisense Inc
- Connects to a variety of data sources, e.g. RDBMS, csv, Excel, R Server, Hadoop, etc
- Handles any transportation data type, including GIS and LRS
- Empowers business users to “self-serve” - exploring data requires no technical knowledge or expertise
- Fast, flexible, scalable and affordable deployment

### 100% Pure LRS™

DEMO SITE: [dashboards.linearbench.com/demo](https://dashboards.linearbench.com/demo)

- 1 Pivot table** dynamically shows the summary of speed limit LRS data in its raw form.
- 2 Mile Log widget** presents speed limit data in LRS format, familiar to transportation professionals.
- 3 LRS widget** presents the same LRS data on-the-fly and on any base map, including customer's own.
- 4 Gauge, columnar chart and donut chart** allow users to explore traffic safety statistics for different years and different functional classifications.
- 5 Calendar heat map and funnel widget** allow users to explore project expenses and remaining budget on any work category in a given year.
